

Presentation to Growth & Innovation showcase 30 January 2018

Elaine Warburton, Group CEO

This document is for informational purposes only and contains forward-looking statements pertaining to the Company's future strategies and plans. Results are dependent upon a number of variables and are strictly hypothetical. Actual results may vary materially and negatively from figures contained herein.

The promise of decentralised POC testing has yet to be fully realised

- Uncompetitive price per test
- Lower sensitivities & specificities
- Long turnaround times
- Lack of multiplexing (simultaneous multiple testing)
- Poor user operation
- Lack of portability
- Lack of connectivity

The Problem: Centralised vs Decentralised

Pathogen enrichment Aim: to replace culture

< 5mins DNA/RNA extraction Use in applied markets

Low cost, simple to use, portable POC MDx platform + connectivity

The Solution: Three platforms innovating the entire MDx process for use individually or integrated

5

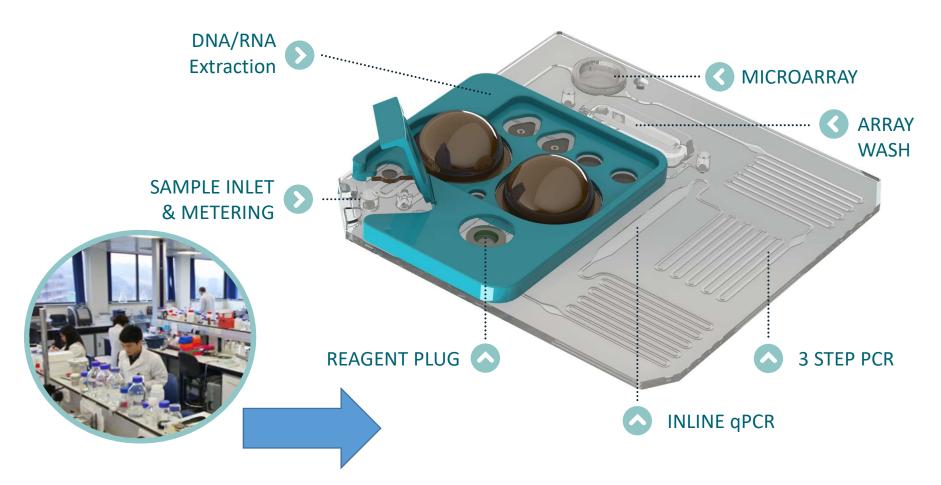

Redefining the MDx workflow Faster, cheaper, more accurate

Q-POC*

THE FUTURE OF DIAGNOSTICS

"Secret Sauce" - an entire diagnostic testing lab in a <\$5 disposable cassette

Confidential

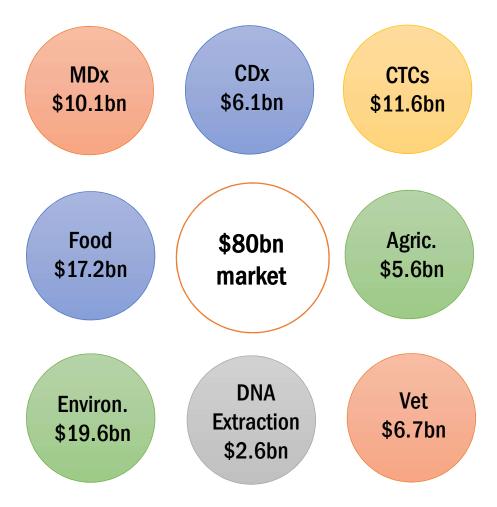

The Internet of Life Anonymised Geostamped Pathogen Data

Connected - 2G, 3G, wifi, bluetooth, USB

Upload results to a hospital management system, the Cloud, digital inteface for real time public health surveillance

Sources: available on request

Market Opportunity \$80bn: DNA is in all livings things so partner to rapidly expand menu content

2019

 \bigcirc

Warfarin PGx

Help reduce £100m increase in NHS oral anticoagulant spend

NHS National Institute for Health Research 2020

HPV

See, treat & vaccinate program

Replace PAP smears

2021

CT, NG, & TV

Over 1bn STI tests performed pa

Loss to follow up exacerbating increase in AMR.

2021

TB, MDR-TB

Rapid TB diagnostic to replace smear microscopy.

Reflex to MDR-TB

Latent TB test in development

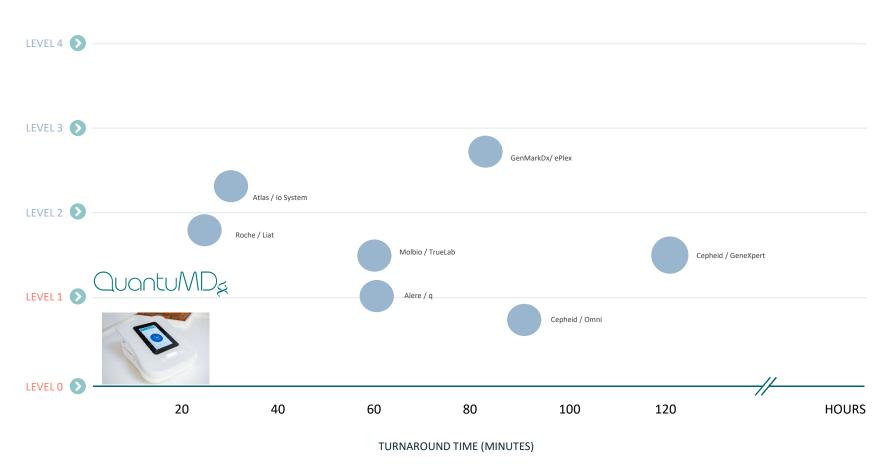

BILL & MELINDA GATES foundation

First assay focus

Demonstrating the power of the Q-POC™ platform

THE FUTURE OF DIAGNOSTICS

First to market: for true decentralised testing

Lab standard results: qPCR AND microarray

Low COGs: transformational margins

Ease of use: minimal training, sample in press go

Time to result: in minutes

Reduce loss to follow up: results at consultation

Connectivity: upload or print out results

Q-POC™ Competitive Advantage

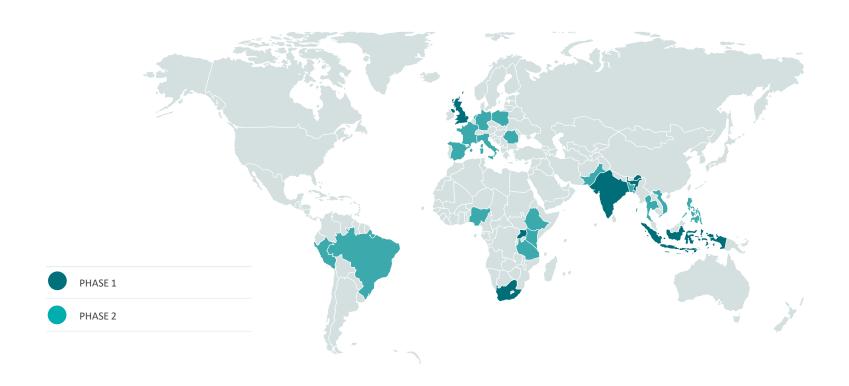

Business model

Rapid menu expansion in high value markets whilst leveraging NGO funding & resources for high volume LMIC market. Own the manufacturing process to retain IPR.

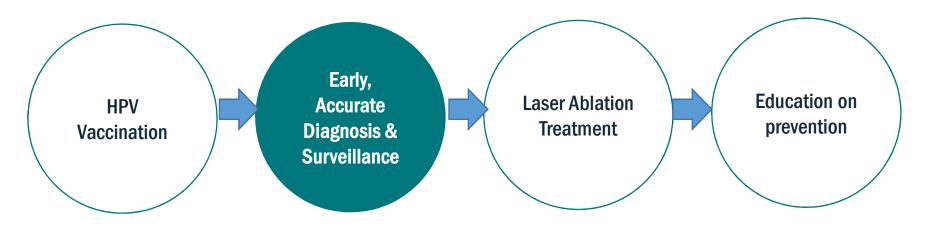

Market adoption: Seek the rapid roll-out of Q-POC™ Installed User Base through partnering and distributor network in preparation for increased menu content

HPV CASE STUDY Positioning Q-POC™ within cervical cancer prevention program

Exemplar assay	HPV is an STD/infection	HPV Causes cancer	Assay detects infection & serotypes
\$9.46bn Cervical cancer diagnostic market by 2021*	Every 8 seconds someone in the world is infected with HPV	13 HPV strains cause 96% of cervical cancer	Assay 13 oncological strains and is positioned for new cervical screening programs

Low income countries Position with portable ablator "SCREEN & TREAT"

High income countries

Cervical cancer screening 2019 HPV screening replacing PAP smears

HPV Competitive Landscape

Q-POC's Competitive Advantage

Regulatory targets

- ISO 13485 Certification 2018
- CE-IVD Marking enter 2019
- Followed by WHO Prequalification
 ASEAN, FDA Market Clearance, CFDA

Patents

- **13 Patent Families**
- 38 Granted Patents
- 11 Exclusively
- in-licensed families covering a further 38 granted patents

Leadership

Seasoned Board - financiers, IVD, Pharma, business

The original Q-POC™ concept

QuantuMDx is created, our first lab is in a garage in Sussex funded by a redundancy cheque

First test bed & disposable

QMDx receives £3m grant and moves to South Africa to observe first hand Dx challenges in a low resource setting

Second test bed & disposable

Awarded £4m grants from NIHR Innovate UK & EU FP7.

QMDx moves back to the UK and expands R&D operations with first £1.5m investment round.

Incorporated QMDx Asia

Previous Seed & Series A funding

£38m raised -funded an iterative design approach leveraging equity with non equity

Electronic reader & biosensor

Awarded £2m Innovate grants.

£5m Second investment round.

Incorporated QuantuMDx USA

First fully integrated reader & disposable

£6m Third investment round

First meeting with Bill Gates, commence COGs reduction to achieve sub \$5 target

Reader plus locked down disposable

£6m Fourth investment round (2016) & £8.2m Shareholders' Round (2017) BMGF & Global Good grants

Prototype portable Q-POC™ in early trials in NHS, Singapore and LMICs

Previous Seed & Series A funding

£38m raised -funded an iterative design approach leveraging equity with non equity

Stage of development & funding

Funding gap of £50m over next 3 years - launching Series B this Quarter with funding leveraged from non-equity diluting sources (eg) NGO **Program Related Investment (PRI) & grants** Confidential

- Raised £38m to date 54% Board, 46% shareholders
- Capital efficient 30% non-equity & 70% ordinary stock
- Seek sufficient funding in tranches. First tranche to complete Q-POC™ development, undertake field studies, install manufacturing pilot lines, clinical & regulatory trials & soft launch
- Consider IPO whilst remaining opportunistic for an M&A

Funding and Exit

Recent M&A activity in our space

2014 - Roche acquired Iquum for \$450m pre-revenue

2014 - bioMerieux acquired BioFire for \$450m plus debt

2015 -Roche acquired GeneWeave for \$425m

2015 - Biocartis IPO value Euro 364m on US10m revenue

2016 - Danaher acquired Cepheid for US\$4bn
